Education

•Bachelor of Technology in Computer Science and Engineering *2023-27*
GLA University, Mathura

Projects

•MedCare

A system built to efficiently manage patient's appointments, billing and hospital records by a secure and user-friendly platform.

- Developed a full-stack Hospital Management System using PHP, Python, SQL, HTML, CSS, and JavaScript.
- Implemented CRUD operations to manage 1000+ patient, doctor, and appointment records efficiently.
- Enhanced system performance with structured backend logic and optimized database queries.

•Jarvis: AI-Powered Voice Assistant

Built a voice-controlled desktop assistant in Python with wake-word activation ("Jarvis").

- Implemented a command-routing engine that executes 20+ voice commands: launching websites, Windows system apps, and playing music from a custom song library.
- Integrated the OpenAI API (GPT-4o-mini) as an intelligent fallback, so unrecognized commands become conversational AI queries with short-term context memory
- Integrated NewsAPI via REST to fetch live top headlines and read them aloud using Windows SAPI text-to-speech.
- Handled API keys securely with a separate credentials module and added error handling for API failures, speech timeouts, and unrecognized input..

•Auto Reply AI ChatBot

AI-powered chatbot that automatically generates context-aware replies to user messages.

- Built a multi-platform AI auto-reply chatbot for WhatsApp and Telegram, powered by OpenAI and Gemini APIs to generate context-aware responses in real time.
- Integrated messaging platform APIs/webhooks to receive incoming messages and send automated replies 24/7 without manual intervention.
- Implemented a multi-LLM design with fallback: if one provider fails or hits rate limits, requests route to the other for high availability.
- Abstracted both LLM providers and both platforms behind common interfaces, so new models or channels can be added without changing core logic.

Experience

•Job Oriented Value-Added Course, GLA University, Mathura *June - July 2025*
Trainee Online

- In-depth understanding of AWS cloud computing services, including EC2, S3, RDS, IAM, VPC.
- Proficient in designing, deploying, and managing fault-tolerant, highly available, and scalable AWS solutions.
- Strong knowledge of architectural best practices, such as AWS Well-Architected Framework, security, performance, and cost optimization.
- Hands-on experience in cloud infrastructure provisioning, monitoring, and automation using AWS Management Console and AWS CLI.

•Deloitte Virtual Data Analytics Job Simulation *March - April 2026*
Trainee Online

- Worked with Excel, PowerBI, SQL, and data visualization tools to generate analytical reports.
- Collaborated with team members to optimize data handling and reporting processes.
- Applied statistical and analytical techniques to improve reporting efficiency.
- Created dashboards and visual reports to support data-driven decision-making.

Technical Skills and Interests

Languages: Java, PHP, Python, Javascript, HTML+CSS
Libraries : Python Libraries, ReactJs
Web Dev Tools: Figma, VScode, Git, Github
Frameworks: ReactJs, NodeJs
Cloud/Databases:AWS services, PowerBI, Relational Database(mySql), mongoDB
Relevent Coursework: Data Structures & Algorithms, Operating Systems, Object Oriented Programming, Database Management System, Software Engineering.
Areas of Interest: Web Design and Development, Cloud Security.
Soft Skills: Problem Solving, Self-learning, Presentation, Adaptability
